TRADING METHOD

FCI - CREDIT PREMIUM PROGRAM (CPP) engages in the selling or "writing" options (puts and calls) on futures contracts in the natural gas, crude oil, coffee, soybeans, corn, and financial currency markets, among others. However, in the future, FCI - CPP may trade a broader portfolio of options, futures and cash markets. In doing so FCI reserves the right to place trades in any commodity futures contract or option contract thereon, on any exchange, foreign or domestic, at FCI's sole discretion. Similar to FCI's Option Selling Strategy program, the primary trading strategy of FCI - CPP will be to sell, on behalf of a client, options on futures contracts. However, FCI - CPP is different from the Option Selling Strategy program because FCI - CPP may sell options that are likely to be closer to the expiration date, ranging from four (4) days to ninety (90) days from expiration, [versus thirty (30) to forty-five (45) days from expiration for the Option Selling Strategy program], and (b) closer to being "in the money". The program also utilizes more of a vertical credit and calendar spread strategy, thus reducing per trade capital requirements. When premium collection transactions become unprofitable contracts, offsetting futures contracts or options are purchased as a hedge to limit further future contract losses. The net effect is that FCI - CPP targets higher returns with additional contracts being executed. There is an increased likelihood of the strike price being met on options written versus the portfolio of options written in the Option Selling Strategy program. Furthermore, FCI - CPP is more progressive with its rolling forward, exiting out of option contracts, and with the rolling further out as a hedge to limit contract losses. FCI - CPP will also utilize directional future trades from time to time. This will occur when underlying futures appear to be over extended in either an over or under valued status in relation to historical values of an underlying commodity. -----

Disclaimer: The risk of loss in trading commodities can be substantial. You should therefore carefully consider whether such trading is suitable for you in light of your financial condition. The high degree of leverage that is often obtainable in commodity trading can work against you as well as for you. The use of leverage can lead to large losses as well as gains. In some cases, managed commodity accounts are subject to substantial charges for management and advisory fees. It may be necessary for those accounts that are subject to these charges to make substantial trading profits to avoid depletion or exhaustion of their assets. The disclosure document contains a complete description of the principal risk factors and each fee to be charged to your account by the Commodity Trading Advisor "CTA").
