TRADING METHOD

FCI OPTION SELLING STRATEGY utilizes a trading strategy that writes options far out-of-the-money with the expectation that the option will expire worthless and FCI's investors will retain the premiums from writing the option. FCI's primary trading philosophy is for profits to be made when the value of options are reduced as a function of time, rather than a function of market direction. FCI may write calls, puts or both calls and puts to take advantage of this strategy. FCI utilizes derivative contracts that statistically have a 80% or greater profitable contract win rate. It is a delta neutral strategy, allowing for positive returns irrespective of market direction. -----

Disclaimer: The risk of loss in trading commodities can be substantial. You should therefore carefully consider whether such trading is suitable for you in light of your financial condition. The high degree of leverage that is often obtainable in commodity trading can work against you as well as for you. The use of leverage can lead to large losses as well as gains. In some cases, managed commodity accounts are subject to substantial charges for management and advisory fees. It may be necessary for those accounts that are subject to these charges to make substantial trading profits to avoid depletion or exhaustion of their assets. The disclosure document contains a complete description of the principal risk factors and each fee to be charged to your account by the Commodity Trading Advisor "CTA").
